AG Matriculation School, Palliyadi.
Board of Education, Tamilnadu
(87%)

PROJECTS

Project title 1

Responsive Portfolio Website with Interactive Features

In this website, I have created five pages: "home," "about me," "qualification," "projects," and "contact." Each page is developed with a **responsive design**. On the "contact" page, users **can send email**s by clicking the "contact me" button and can also fill out the "hire me" **page** to send an offer letter to a **specified email address**. Additionally, users have the option to **download the CV**. A unique feature of this website is that users can enter their names for a greeting message, and this information is stored in **JSON format**.

Project title 2

New year countdown clock

The New Year Countdown project aims to create a digital countdown application that counts down the seconds, minutes, and hours until the beginning of the New Year. It will be a visually appealing and user-friendly application that provides a fun and interactive way for users to welcome the upcoming year.
